The Nova 130 Magnet Wire Elongation Tester performs the elongation test according to NEMA or IEC and JIS specifications. The tester can be calibrated traceable to N.I.S.T. The elongation tester elongates a specimen of annealed magnet wire with a test length of 10 inches (25.4 cm) to a predetermined % elongation up to 60% or to failure. The maximum elongation is 60 %. A laser engraved scale is used to indicate the percent elongation.

The tester can test wire sizes 18 AWG to 6 AWG (1 mm to 4 mm).

Ball screw and linear guide assembly together with reliable electronics in a totally enclosed chassis provide a sturdy and reliable test platform.
